Angel Garcia Martinez

AI Application & Agent Engineer | Multi-Agent Systems · Tool Integrations · Guardrails · Production Automation

San Jose, CA · angelgm.tech@gmail.com · linkedin.com/in/angelgtech · Bilingual English / Spanish

SUMMARY

Builder of AI agent systems that real people rely on every day. Over the past year I designed and shipped, with Claude Code, a team of specialist agents that runs day-to-day operations for a San Jose nonprofit across two computers, with shared memory, hand-offs, scheduled runs and human approval gates. I also built the apps those agents maintain: an Apps Script points engine for 3,000+ families, an inventory system with 550+ automated tests and a Python browser robot. On my own time I built a real-time market-data automation service with locked-down AI helpers, hard limits and a 12-hour dry run before going live. My focus is what makes agents safe to trust: permission hooks, dry runs, backups, read-back checks and undo logs. Google IT Support certified.

SKILLS

- **Agent engineering:** Claude Code (subagents, skills, hooks, slash commands, headless and scheduled runs), multi-agent orchestration and hand-offs, MCP servers and connectors, tool and API integration, system-prompt design, human-in-the-loop approval, guardrail hooks, headless agents with structured JSON output, prompt-injection defenses
- **LLM applications:** vision extraction from handwritten forms, fuzzy matching with confidence tiers and review queues, LLM-assisted email triage and classification, multi-provider model routing (Anthropic, Fireworks), usage and cost tracking
- **Software:** Python (Flask, SQLite, Pillow, browser automation), Google Apps Script (JavaScript), PowerShell, Bash, REST APIs, Google Cloud OAuth, Gmail / Drive / Calendar / Sheets APIs, Mailchimp API, signed API requests (ES256), Server-Sent Events, ffmpeg
- **Shipping:** automated and mock tests, sandbox copies, dry-run → deploy → verify pipelines, backups and undo logs, dry runs on live data, off switches, rate limits and circuit breakers, plain-language docs and hand-off notes

EXPERIENCE

Operations & Engagement Coordinator · Sunday Friends Foundation · San Jose, CA · Mar 2025 – Present

- Designed a multi-agent operations system in Claude Code: a coordinator agent routes each request to specialist agents (attendance, points, inventory, communications, inbox triage, program admin), each with its own instructions, preloaded skills and notebook.
- Built coordination between agents on two computers: a shared notice board and notebook, hand-off notes, a relay that lets one agent take over when the other hits its usage limit, and a clash guard that holds a step if the other agent changed the same file in the last 30 minutes (170+ tests).
- Put people in the loop: agents only draft emails, code ships only after a named "yes", and every deploy runs a dry run, then a read-back check that the live code matches the tested build. An API skill hard-blocks send, schedule and delete calls.
- Shipped the apps the agents maintain: an Apps Script participation-points engine for 3,000+ families, La Tiendita's inventory and distribution system (550+ automated tests, a sandbox copy, backups before every push; 650+ bags to 170+ families in Jul–Sep 2026), and a Python browser robot that exports PearSuite data on a schedule without storing credentials.
- Used LLM vision to turn handwritten sign-in sheets and Zoom rosters into records: fuzzy name and ID matching with confidence tiers, a review queue and an audit log with undo, feeding a SQLite database of 7,500+ attendance records and funder reports (1,000+ families and 4,000+ people served by food distribution in a year).
- Run scheduled agents unattended every morning (inbox triage, supply-order checks) through Windows Task Scheduler; they write their reports to the shared board.

Founder & Creative Technologist · HIGHCLOUDSTUDIOS · San Jose, CA · 2025 – Present

- Built a scripted video pipeline (After Effects ExtendScript, aerender, ffmpeg) that turns a folder of event photos into finished recap reels for live events.

Web Developer, WordPress Specialist · Bay Era Digital (freelance) · Remote · Jan 2024 – Present

- Build, migrate and maintain small-business sites, including a Squarespace-to-WordPress move with domain, DNS and Google Workspace email.

Earlier: Co-owner & Lead Photographer, Addie's Photography (2016–present) · Hospitality Staff Coordinator, Servers On Demand (2009–2016): built a WordPress time-collection tool that saved hundreds of hours of accounting work · Program Coordinator, One Economy Corporation (2008–2010): taught computer literacy to high school students.

AI PROJECTS

- **Personal AI operations system (2026):** a coordinator agent with 6 specialist agents (art, video, photography business, email, IT, research) and 3 headless agents that run on a schedule, one-command routing, a status board and a job log that shows when a new specialist is worth building.
- **Agent permission guards (2026):** 5 Python hooks that inspect every command and connector call an agent makes, fence off employer data and ask a person before any send, share, delete or financial action; 300+ automated checks.
- **Real-time market-data automation (2026):** a Python service on a live financial API that runs every 15 minutes with hard limits in code, a restricted key that can't withdraw funds, a 12-hour dry run before going live, a balance check on every run that pauses it on any mismatch, and a one-click off switch; 100+ automated tests. A testing lab ran 140+ simulations with real fees, and locked-down AI helpers turn research videos and news into scored JSON reports but can't act.
- **Email alert relay (2026):** the system emails its owner alerts and a daily summary, and the owner replies in plain words. A headless agent with read-only tools turns each reply into one action from a short safe list (answer, pause, mute) or queues it for approval. After a retry bug resent one alert dozens of times, I rebuilt sending as at-most-once, with a message-ID check and hourly and daily caps.
- **Multi-account Gmail tool (2026):** a Google Cloud project with OAuth and 5 APIs, one key ring per account and a mix-up check after every sign-in; archived 16,000+ emails in approved batches with undo logs, nothing deleted.
- **Model routing and recovery (2026):** routed Claude Code through Fireworks (model picked per turn, with a switch to an open model when the Claude plan limit is reached), a status line showing usage and cost, and a repair hook that rewrites unsupported content so stalled sessions resume.
- **YouTube research skill (2026):** an agent skill that pulls transcripts, metadata and screenshots with yt-dlp, then writes a summary and a tidy output folder.
- **Media library web app (2026):** a Flask app for a 1,600+ item library that streams video from disk, auto-tags items and saves mood boards. It also holds 900+ saved Instagram and Facebook posts with their captions, sorted onto topic shelves by an AI agent in reviewed batches; the owner's pick always wins.

EDUCATION & CERTIFICATIONS

- **Google IT Support Professional Certificate**, Google / Coursera, Oct 2024 (credential 68B1TJM87YXH)
- **IT Support Training Program**, JobTrain, Menlo Park, CA, Aug – Oct 2024
- **General coursework**, De Anza College, Cupertino, CA
- **Lisa Y. Sullivan Award**, One Economy Corporation, 2006: a $5,000 scholarship for youth who use technology to transform their communities
