# Angel Garcia Martinez

**Operations & AI Automation Specialist** | Program Operations · Workflow Automation · Google Workspace

San Jose, CA · angelgm.tech@gmail.com · linkedin.com/in/angelgtech · Bilingual English / Spanish

## SUMMARY

Operations coordinator who turns manual, repetitive work into systems that run on their own. At Sunday Friends Foundation I designed and built, with Claude Code, the automation the nonprofit runs on: a participation-points engine for 3,000+ families, an inventory and distribution system for basic-needs bags, a robot that pulls case-management data on a schedule, and AI agents that triage email and draft updates. Every system has approval steps, tests and backups. Google IT Support certified.

## SKILLS

- **AI and automation:** Claude Code multi-agent workflows (agents, skills, hooks, scheduled runs), agent guardrails and human-approval steps, browser automation, ChatGPT, NotebookLM, generative AI for branding and documents
- **Scripting and APIs:** Python, Google Apps Script, SQL (SQLite), PowerShell, Bash, Flask, Google Cloud OAuth, Gmail / Drive / Calendar / Sheets / Docs APIs, Mailchimp API, ffmpeg
- **Operations:** program and event logistics, volunteer management, scheduling at scale, participation tracking and grant reporting, basic-needs inventory and purchasing, inventory control (barcode, FIFO, 5S)
- **Platforms:** Google Workspace, PearSuite, Bloomerang CRM, Mailchimp, Squarespace, VolunteerHub, Insightly CRM, Snipe-IT, WordPress, Microsoft Office

## EXPERIENCE

**Operations & Engagement Coordinator** · Sunday Friends Foundation · San Jose, CA · Mar 2025 – Present

- Designed a two-computer AI operations setup in Claude Code: a coordinator agent routes work to specialist agents for attendance, inventory, communications and email triage, with a shared notice board, hand-off notes and a scheduled morning inbox triage. Nothing is sent or deployed without a person's yes.
- Built the participation-points engine in Google Sheets and Apps Script: it scores 3,000+ families into tiers, checks staff uploads against PearSuite and lists the fixes needed. A Python robot pulls PearSuite exports on a schedule, so the engine updates without manual downloads.
- Built La Tiendita's inventory and distribution system: pre-order forms build each packing sheet, stock updates as bags go out, deliveries are logged from Amazon order emails and reports, and the sheet suggests what to reorder. 550+ automated tests and a sandbox copy protect every update; 650+ bags reached 170+ families in Jul–Sep 2026.
- Built an OCR-to-database pipeline: paper sign-in sheets and Zoom rosters flow into a SQLite database (3,000+ members, 7,500+ attendance records) with confidence scoring, a review queue, an audit log and backups.
- Produce funder reports from that data: a year of food distribution (1,000+ families and 4,000+ people over 40+ distribution days, each number linked to its scanned sign-in sheet) and a quarterly family report covering 250+ families, children 0–5 and demographics.
- Run logistics for workshops, classes and Community Days, and used AI tools with Dream. Build. Mentor. Lab entrepreneurs; cohort 2 graduated more than a dozen family businesses in July 2025.

**Founder & Creative Technologist** · HIGHCLOUDSTUDIOS · San Jose, CA · 2025 – Present

- Automated video production: a scripted After Effects and ffmpeg pipeline turns a folder of event photos into finished recap reels for live events.
- Built a Flask media app that indexes a 1,600+ item library, streams video from disk and holds 900+ saved posts sorted onto topic shelves by an AI agent.

**Web Developer, WordPress Specialist** · Bay Era Digital (freelance) · Remote · Jan 2024 – Present

- Build, migrate and maintain small-business WordPress sites, including domain, DNS and Google Workspace email setup, with scheduled backups and disaster-recovery plans.

**Hospitality Staff Coordinator** · Servers On Demand · San Francisco Bay Area · 2009 – 2016

- Scheduled more than 300 culinary staff for catered events at venues including LinkedIn, Google and Stanford University.

- Moved staff time collection onto the company's WordPress site, saving hundreds of hours of accounting work and cutting errors.
- Trained non-technical staff with bilingual video tutorials.

**Earlier:** Warehouse Distribution Specialist, San José–Evergreen Community College District (2019–2021), with barcode inventory control and campus deliveries · Production Associate, Tesla (2018–2019): built a live inventory tracker in Google Sheets and applied 5S.

## PROJECTS

- **Personal AI operations system (2026):** designed a Claude Code assistant that routes work to 6 specialist agents (art, video, photography business, email, IT, research) and 3 scheduled background agents, keeps a shared status board and logs every job.
- **Agent guardrails (2026):** 5 Python safety hooks review each agent command and ask before anything touches work data or sends, shares, deletes or takes a financial action; 300+ automated checks.
- **Real-time market-data automation (2026):** a Python service on a live financial API runs every 15 minutes with hard limits, a 12-hour dry run before launch, a balance check on every run and a one-click off switch. It emails alerts and a daily summary; plain-language replies go to a locked-down AI agent that can only pick a safe action.
- **Inbox automation (2026):** a Google Cloud project with OAuth and 5 APIs powers a multi-account Gmail tool. It archived 16,000+ emails in approved batches, nothing deleted, with full undo logs (inbox from 16,000+ to about 300).
- **Drive reorganization (2026):** restructured a 40 GB Google Drive into a documented folder system, with an undo list for every move.

## EDUCATION & CERTIFICATIONS

- Google IT Support Professional Certificate, Google / Coursera, Oct 2024
- IT Support Training Program, JobTrain, Menlo Park, CA, Aug – Oct 2024
- General coursework, De Anza College, Cupertino, CA
- Lisa Y. Sullivan Award, One Economy Corporation, 2006: a $5,000 scholarship for youth who use technology to transform their communities
