Angel Garcia Martinez

Forward Deployed / AI Deployment Engineer | Embedded AI Delivery · Workflow Automation · Integrations · User Adoption

San Jose, CA · angelgm.tech@gmail.com · linkedin.com/in/angelgtech · Bilingual English / Spanish

SUMMARY

I work inside the operation, learn how the work really happens, and ship AI-built tools the people there actually use. At Sunday Friends Foundation I turned paper sign-ins, spreadsheets and email threads into working systems for staff and 3,000+ families: a points engine, an inventory and distribution system, an attendance database and funder reports. I built them with Claude Code and deployed them with sandboxes, tests and staff sign-off. Bilingual English / Spanish, explaining technology to non-technical users since 2008, and Google IT Support certified.

SKILLS

- **Deployment:** discovery with users, process mapping, scoping in small approved steps, sandbox testing, staged releases, change logs, SOPs and training, bilingual support
- **Building:** Claude Code agents and skills, Python (Flask, SQLite, browser automation), Google Apps Script, REST APIs, Google Workspace APIs, MCP connectors, LLM vision extraction
- **Integrations:** PearSuite (case management), Bloomerang CRM, Mailchimp, Squarespace, Google Workspace, Amazon Business order data, Zoom rosters, Santa Clara County HMIS
- **People:** executive sign-off, program staff, volunteers, funders and partners such as Santa Clara University

EXPERIENCE

Operations & Engagement Coordinator · Sunday Friends Foundation · San Jose, CA · Mar 2025 – Present

- Mapped how basic-needs bags, participation points and sign-ins actually moved between staff, volunteers and paper forms, then rebuilt each process in small steps, each approved before it went live.
- Shipped La Tiendita's inventory and distribution system in more than a dozen releases in October 2026 alone, each tested in a sandbox copy (550+ automated tests), backed up and verified live; 650+ basic-needs bags reached 170+ families in Jul–Sep 2026.
- Connected systems that didn't talk to each other: a Python robot exports PearSuite case-management data on a schedule, an Apps Script engine imports it and scores 3,000+ families into tiers, and Amazon order emails and reports feed the inventory automatically.
- Turned handwritten sign-in sheets into data with LLM vision and fuzzy matching, and built funder-ready reports with every number linked to its source scan: 1,000+ families and 4,000+ people served by food distribution in a year, plus a quarterly report on 250+ families and children 0–5.
- Supported adoption by non-technical staff in English and Spanish: a points SOP, "how this sheet works" tabs, a bulk-add tool for staff uploads, and a follow-up list that tells each staff member which entries to fix.
- Run IT alongside the builds (Google Workspace, Trend Micro endpoint security, Snipe-IT device inventory, HMIS data-security training), and launched a bilingual computer class for families in July 2026.

Web Developer, WordPress Specialist · Bay Era Digital (freelance) · Remote · Jan 2024 – Present

- Deliver client projects end to end: a Squarespace-to-WordPress migration with domain transfer and Google Workspace email, and the Alexis for Seaside campaign site with donation, volunteer and event sign-up paths.

Hospitality Staff Coordinator · Servers On Demand · San Francisco Bay Area · 2009 – 2016

- Volunteered to set up a new office's computers and network, then built a WordPress time-collection tool that staff adopted, saving hundreds of hours of accounting work, with bilingual video tutorials so they could use it on their own.
- Scheduled more than 300 culinary staff for catered events at venues including LinkedIn, Google and Stanford University.

Earlier: Founder, HIGHCLOUDSTUDIOS (2025–present): scripted After Effects and ffmpeg pipeline for event recap reels · Co-owner & Lead Photographer, Addie's Photography (2016–present): client shoots from setup to delivery · Program Coordinator, One Economy Corporation (2008–2010): taught computer literacy to high school students.

SELECTED PROJECTS

- **Personal AI operations system (2026):** a coordinator agent with 6 specialist agents and 3 scheduled headless agents, a status board and a job log; 5 Python permission guards ask before any send, share, delete or financial action (300+ automated checks).
- **Real-time market-data automation (2026):** taken live in stages: a 12-hour dry run on live data, then half size, with full size only on approval. Hard limits in code, a restricted key that can't withdraw funds, a balance check on every run and a one-click off switch; an edge-case review found and fixed 13 failure modes before launch.
- **Email alert relay (2026):** owner-only alerts, plus plain-language replies read by a locked-down AI agent that can only pick a safe action or queue a request for approval. Fixed a duplicate-send bug with at-most-once sending and hourly and daily caps.
- **Multi-account Gmail tool (2026):** Google Cloud OAuth and 5 APIs; archived 16,000+ emails in approved batches with undo logs, nothing deleted.
- **Event check-in app prototype (2026):** a Flask app with QR check-in, a live check-in dashboard and admin safeguards on the public page.

EDUCATION & CERTIFICATIONS

- **Google IT Support Professional Certificate**, Google / Coursera, Oct 2024 (credential 68B1TJM87YXH)
- **IT Support Training Program**, JobTrain, Menlo Park, CA, Aug – Oct 2024
- **General coursework**, De Anza College, Cupertino, CA
- **Lisa Y. Sullivan Award**, One Economy Corporation, 2006: a $5,000 scholarship for youth who use technology to transform their communities
